Summary

AI Architect at Innoart Technologies Private Limited since September 2026, with Innoart continuously since February 2017. Production AI systems, cloud platforms, and enterprise software.

Agentic systems, enterprise copilots, and the cloud infrastructure and observability around them — from LLM orchestration to production operations.

Experience — Innoart Technologies Private Limited

9+ years · Still employed there. One continuous tenure since February 2017, across five roles.

AI Architect (Sep 2026 — Present) — current

Lead Software Engineering (Feb 2022 — Aug 2026)

Senior Software Engineer (Feb 2020 — Jan 2022)

Software Engineer (Feb 2018 — Jan 2020)

Trainee Software Engineer (Feb 2017 — Jan 2018)

Scope

- Front-end and back-end development of an industry-agnostic Digital Transformation Platform.
- Incident Management System and a Social Media Hub for a top educational organization.
- Micro front-ends and microservices, including flexible web parts used to improve the user experience.
- REST APIs documented with OpenAPI, with OAuth 2.0 for authentication and authorization.
- Performance debugging, Agile delivery, and architecture review of newer technical options.
- 3D rendering with Three.js.

Education

Master of Computer Application — Anand Institute (Anna University), 2015

BSc Computer Science — Syed Hameedha (Alagappa University), 2013

Technical skills

Frontend: Angular 1–14, React, Three.js, AG-UI / agentic UI

Full Stack: Node.js, TypeScript, Python, REST & streaming APIs, MongoDB, MEAN stack (Express, Angular, Node.js)

AI / LLM: LLMs, Agentic AI, AWS Bedrock, Prompt engineering, RAG, Tool calling, Multi-agent orchestration

Cloud: AWS, Azure, Microservices, Event-driven systems

DevOps: Docker, Kubernetes, CI/CD, Git

Databases: MongoDB, PostgreSQL, Neo4j, MySQL, ClickHouse

Architecture: Micro front-ends, OpenAPI, OAuth 2.0, Distributed systems

Developer tools: Cursor, Claude, Spec Kit, Spec-driven delivery

Selected systems

SpecGuard

TypeScript OpenAPI 3.0/3.1 breaking-change detector — library, CLI, CI action, and Dockerfile with Vitest coverage.

Outcome: MIT-licensed OpenAPI breaking-change detection for local workflows and automated pipelines.

Multi-Agent AI Orchestration Platform

Production multi-agent system with orchestration, tool calling, and streaming responses for complex AI workflows.

Outcome: A production system for complex AI workflows: orchestration, tool calling, and streaming in one platform.

Healthcare AI Copilot

Conversational healthcare assistant with agentic UI patterns and voice-enabled interaction.

Outcome: A voice-capable conversational healthcare assistant with agentic UI and streaming chat.

Trade Finance AI Copilot

Enterprise trade-finance workflows augmented with AI across Angular, Node.js, and Azure.

Outcome: Enterprise trade-finance workflows augmented with AI, deployed on Azure, and operated with observability.

Enterprise Observability Platform

Distributed monitoring platform with sharded data stores and Docker-based infrastructure.

Outcome: Operational visibility for a distributed system: service and entity tracking, audit events, and alerts.

AI Developer Productivity

Spec-driven, AI-assisted delivery — from specifications to implementation with Cursor, Claude, and Spec Kit.

Outcome: Faster, clearer delivery for product teams, through a repeatable spec-to-implementation workflow.

Stack highlights

AI: LLMs, Agentic AI, AWS Bedrock, Prompt engineering, RAG, AI Agents, Tool Calling, Streaming

Full Stack: Node.js, TypeScript, Python, MEAN, MongoDB

Frontend: Angular 1–14, React, Three.js

Cloud: Azure, AWS

DevOps: Docker, CI/CD, Git, Kubernetes

Databases: MongoDB, PostgreSQL, Neo4j, MySQL, ClickHouse

Architecture: Microservices, micro front-ends, REST APIs, event-driven systems

Observability: Logs, Metrics, Alerts, Audit Events
